

Shailesh Chaudhari

Full-Stack Software Engineer - Backend-Focused

shailesh93602@gmail.com | +91 9313026530 | github.com/Shailesh93602 | linkedin.com/in/shaileshbhai-chaudhari | shaileshchaudhari.vercel.app

SUMMARY

Full-stack engineer with 2.5+ years shipping production systems end to end, strongest on the backend: multi-tenant test-execution infrastructure, idempotent webhook pipelines and real-time platforms. Backend in TypeScript/Node.js with PostgreSQL, Redis and Docker; frontend in React and Next.js, including interfaces audited to WCAG 2.1 AA. Focused on correctness: concurrency control, deterministic testing, and verification that asserts real outcomes.

EXPERIENCE

Software Engineer, ContextQA

Jul 2025 - Present

- Build the backend of the core QA-automation platform: a test-execution engine orchestrating concurrent runs across Playwright, WebdriverIO and LambdaTest; VNC streaming for live browser-session debugging; and the REST APIs driving run history, assertions and artifacts.
- Shipped 2 products end to end (React, Next.js, TypeScript, Tailwind + Node.js): Vibe Testing, an AI-assisted UI testing extension streaming live logs over WebSockets, and AxeTos, which audits pages against WCAG A/AA/AAA with precise DOM locators. Both still in use.

Software Developer, eSparkBiz Technologies

Aug 2024 - Jul 2025

- Delivered 3 client products full-stack in React and Node.js (EdTech scheduling, sign-language e-learning, corporate LMS), all on schedule with zero production incidents.
- Integrated a third-party scheduling API with a Python/CPLEX optimization service; synchronized large datasets and built the real-time calendar UI in React, backed by AWS S3 file workflows.

Software Developer Intern, eSparkBiz Technologies

Jan 2024 - Aug 2024

- Built REST APIs and React/Next.js interfaces with authentication and role-based access control (RBAC); integrated Stripe payments and Supabase authentication.

PROJECTS

KhataGO - WhatsApp-first bookkeeping for Indian MSMEs khatago.vercel.app

- Idempotency-guarded reconciliation pipeline: Meta webhook to database-enforced deduplication to LLM function-calling to ledger writes to Tally XML export. Exactly-once effects over an at-least-once delivery channel, enforced by a unique constraint rather than a distributed lock; 8 simultaneous deliveries of the same message produce exactly one ledger write.
- Containerized (Docker) polling worker over a PostgreSQL-backed queue with an atomic claim, exponential backoff with jitter, and a dead-letter queue (DLQ) with audited replay.
- Next.js/React app in three languages (English, Hindi, Gujarati) with locale-aware invoices and GST reporting.

BALLAST - deterministic simulation of a multi-tenant session control plane github.com/Shailesh93602/ballast

- Per-tenant concurrency caps, quota windows, and leases over an unreliable substrate; every run is a pure function of one integer seed and replays byte-identically, verified across 1,000 seeds.
- Verified 4 independent ways: 8 invariants, a reference oracle, mutation testing (158 of 165 mutants killed), and a self-verifying shrinker. Found 9 real bugs, about half in the checker rather than the implementation.
- Measured 3 concurrency-control strategies for a flash sale against a real PostgreSQL under 200 concurrent buyers: read-then-write oversold 200 of 5 units; conditional update and optimistic versioning each sold exactly 5.

EduScale - real-time coding battles across multiple Node.js instances eduscale.vercel.app | github.com/Shailesh93602/DevScale

- Cross-instance coordination across 2+ Node.js server instances for real-time battles: Socket.io Redis adapter for pub/sub, Redlock distributed mutex for battle start, per-key circuit breakers around LLM calls, and Prometheus metrics.
- Next.js/React frontend with role-gated routes, audited to WCAG 2.1 AA by automated axe checks that run on every public route in CI.

SKILLS

- **Languages:** TypeScript, JavaScript, SQL, C++
- **Frontend:** React, Next.js, Tailwind CSS, shadcn/ui, Redux, responsive UI, accessibility (WCAG 2.1 AA)
- **Backend:** Node.js, Express.js, NestJS, REST APIs, Socket.io, Prisma ORM
- **Databases:** PostgreSQL, Redis, MongoDB (relational and non-relational)
- **Infrastructure:** Docker, Docker Compose, GitHub Actions (CI/CD), Vercel, Supabase, AWS S3
- **Reliability patterns:** idempotency, concurrency control, distributed locks, message queues and dead-letter queues, circuit breakers, RBAC, mutation and property-based testing

EDUCATION

- B.E. in Information Technology, Government Engineering College, Bhavnagar, Gujarat - 2020 to 2024 - CGPA 7.99/10

ACHIEVEMENTS

- Institute Rank 1 on GeeksforGeeks (604+ problems solved); 700+ DSA problems solved across platforms
- 5-star C++ rating on HackerRank; active on CodeChef and LeetCode
- Finalist, New India Vibrant Hackathon 2023
