

Shailesh Chaudhari

Software Engineer — backend & distributed systems

shailesh93602@gmail.com · +91 93130 26530 · github.com/Shailesh93602 · linkedin.com/in/shaileshbhai-chaudhari · shaileshchaudhari.vercel.app

EXPERIENCE

Software Engineer · ContextQA Jul 2025 – Present

- Backend of the core QA-automation platform: the test-execution engine orchestrating runs across Playwright, WebdriverIO and LambdaTest; VNC streaming for live browser-session debugging; and the APIs driving run history, assertions and artifacts.
- Shipped two Chrome extensions in the first months — Vibe Testing (AI-assisted UI testing with real-time log streaming over WebSockets) and AxeTos (WCAG A/AA/AAA auditing with automated fix suggestions). Both shipped and still in use.

Software Developer · eSparkBiz Technologies Aug 2024 – Jul 2025

- Full-stack across three simultaneous client products (EdTech scheduling, sign-language e-learning, corporate LMS); all three delivered on schedule with no production incidents.
- Integrated a third-party scheduling API with a Python/CPLEX optimization service; synchronized large datasets and built a real-time calendar UI with S3 file workflows.

Software Developer Intern · eSparkBiz Technologies Jan 2024 – Aug 2024

- Built RESTful APIs and Next.js/NestJS front-ends with authentication and role-based access control; integrated Stripe and Supabase.

PROJECTS

KhataGO — WhatsApp-first bookkeeping for Indian MSMEs · khatago.vercel.app

- Idempotency-guarded reconciliation pipeline: Meta webhook → DB-enforced dedup → LLM function-calling → ledger writes → Tally XML export. Exactly-once effects over an at-least-once channel, enforced by a unique constraint rather than a distributed lock.
- Containerized polling worker over a Postgres-backed queue (atomic PENDING→PROCESSING claim), with a dead-letter queue and audited replay.

BALLAST — deterministic simulation of a multi-tenant session control plane · github.com/Shailesh93602/ballast

- Per-tenant concurrency caps, quota windows, and leases over an unreliable substrate — the entire run a pure function of one integer seed. Verified with 8 invariants, a reference oracle, and mutation testing; found 6 real bugs, as many in the checker as in the implementation.

EduScale — real-time coding battles across multiple Node instances · eduscale.vercel.app · github.com/Shailesh93602/DevScale

- Socket.io Redis adapter for cross-instance events, Redlock battle-start mutex, per-key circuit breakers around LLM calls, Prometheus metrics.

SKILLS

- Languages:** TypeScript, JavaScript, SQL, C++
- Backend:** Node.js, Express, NestJS, Next.js, Prisma
- Data:** PostgreSQL, Redis, MongoDB
- Infra:** Docker, GitHub Actions, Vercel, Supabase
- Patterns:** idempotency, concurrency control, queues/DLQ, Socket.io at scale, mutation & property-based testing

EDUCATION & ACHIEVEMENTS

- B.E. Information Technology**, Gujarat — 2020–2024 · CGPA 7.99/10
- Institute Rank 1 — GeeksforGeeks
- 700+ problems solved on CodeChef · 5★ C++ on HackerRank
- Finalist — New India Vibrant Hackathon 2023
